Sequence 1882, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
TITLE OF INVENTION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING
TITLE OF INVENTION: ARRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR PILING DATE: 1998-02-18

PRIOR PILING DATE: 1998-02-18

PRIOR PILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                       APPLICANT: Roberts, Thomas M.
APPLICANT: King, Frederick J.
APPLICANT: King, Frederick J.
APPLICANT: Harris, David F.
APPLICANT: Harris, David F.
APPLICANT: Harris, David F.
APPLICANT: Chan, Joanne
TITLE OF INVENTION: Differentiation Enhancing Factors and Uses;
TITLE OF INVENTION: Therefor
FILE REPERENCE: DFN-021
CURRENT APPLICATION NUMBER: US/09/023,905A
CURRENT FILING DATE: 1998-02-13
PRIOR APPLICATION NUMBER: US 60/038,191
PRIOR PLING DATE: 1997-02-14
NUMBER OF SEQ ID NOS: 39
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 903;

Patent No. 2916752
GENERAL INFORMATION:
APPLICANT: Gottschling, Daniel E.
APPLICANT: Singer, Miriam S.
TITLE OF INVENTION: Telomerase Compositions and Methods
NUMBER OF SEQUENCES: 32
CORRESPONDENCE 32
CORRESPERS: Arnold, White & Durkee
STREET: P.O. Box 4433
CITY: Houston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0; Indels

Sequence 29927, Application US/09252991A

Patent No. 6551795

GENERAL INFORMATION:
APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 10796.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 29927

LENGTH: 1129
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 31760, Application US/09252991A

Sequence 24, Application US/07812421

Patent No. 593267

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Caccei, Thomas E.

APPLICANT: Szumanski, Maria B.W.

TITLE OF INVENTION: SYNTHETIC GENE CODING FOR ITS PRODUCTION NUMBER OF SEQUENCES: 43

CORRESPONDENCE ADDRESS:

ADDRESSEE: WHITHAM, CURTIS & WHITHAM

STREET: Reston Intl. Center, 11800 Sunrise Valley Dr.,

STREET: Suite 900
         APPLICANT: Caceci, Thomas
APPLICANT: Toth, Thomas B.
APPLICANT: Toth, Thomas B.
APPLICANT: Szumanski, Maria B.W.
TITLE OF INVENTION: SYNTHETIC ANTIFREEZE PEPTIDE AND
TITLE OF INVENTION: SYNTHETIC GENE CODING FOR ITS PRODUCTION
NUMBER OF SEQUENCES: 43
CORRESPONDENCE ADDRESS:
ADDRESSEE: WHITHAM, CURTIS & WHITHAM
STREET: Reston Intl. Center, 11800 Sunrise Valley Dr.,
STREET: Reston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0; Indels

Patent No. 5849537

GENERAL INFORMATION

APPLICANT: Tripp, Matthew

APPLICANT: Lusk, Lance

APPLICANT: Huige, Nick

APPLICANT: Rhodes, Thomas

APPLICANT: Chicoye, Etzer

APPLICANT: Barney, Michael C.

APPLICANT: Barney, Michael C.

APPLICANT: Barney, Michael C.

APPLICANT: Cronan, Charles L.

TITLE OF INVENTION: IN YEAST

NUMBER OF SEQUENCES:

ADDRESSEE: Thad Kryshak, Quarles & Brady

CORRESPONDENCE ADDRESS:

ADDRESSEE: Thad Kryshak, Quarles & Brady
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0; Indels

Sequence 1, Application US/07812421

Patent No. 5932697

GENERAL INFORMATION:
APPLICANT: Caccei, Thomas E.
APPLICANT: Stumanski, Maria B.W.
TITLE OF INVENTION: SYNTHETIC ANTIFREEZE PEPTIDE AND
TITLE OF INVENTION: SYNTHETIC GENE CODING FOR ITS PRODUCTION
NUMBER OF SEQUENCES: 43
CORRESPONDENCE ADDRESS:
ADDRESSEE: WHITHAM, CURTIS & WHITHAM
STREET: Reston Intl. Center, 11800 Sunrise Valley Dr.,

i Sequence 30, Application US/09117121
i Patent No. 6307020
i TITLE OF INVENTION: Intracellular Antifreeze Polypeptides
i TITLE OF INVENTION: and Nucleic Acids
i UNMBER OF SEQUENCES: 46
i CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 4, Application US/08199776
; Sequence 4, Application US/08199776
; Patent No. 5594120
; GENERAL INFORMATION:
APPLICANT: Berner, Michael B.
APPLICANT: Parker, Christina M.
TITLE OF INVENTION: No. 5594120el integrin alpha subunit
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB 4; Length 54;

Sequence 4, Application US/09293238B
Patent No. 6455042
GENERAL INFORMATION:
APPLICANT: Brenner, Michael B.
APPLICANT: Barker, Christina M.
TITLE OF INVENTION: A Method of Treating Ulcerative Colitis
TITLE OF INVENTION: or Crohn's Disease by Administering an Antibod
TITLE OF INVENTION: Beta 7 Integrin
FILE REFREEMER: L056/7005/ERP
CURRENT APPLICATION NUMBER: US/09/293,238B
CURRENT FILING DATE: 1999-04-16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    APPLICANT: Brenner, Michael B.
APPLICANT: Brenner, Christina M.
TITLE OF INTENTION: Antibodies to No. 6063906el Integrin Alpha
TITLE OF INVENTION: Subunit
FILE REFERENCE: B0801/7080/RRP
CURRENT PELLING DATE: 1997-06-20
EARLIER APPLICATION NUMBER: US 08/663,731
EARLIER APPLICATION NUMBER: US 08/199,776

Sequence 16, Application US/08702344

Patent No. 572314

Patent No. 572314

Patent No. 572314

APPLICANT: Jacobs, Kenneth

APPLICANT: MacOy, John

APPLICANT: MacOy, John

APPLICANT: Marberg, David

APPLICANT: Merberg, David

APPLICANT: Treacy, Maunic

APPLICANT: Spaulding, Vikki

TITLE OF INVENTION: SECRETED PROTEINS AND POLYNUCLEOTIDES

TITLE OF INVENTION: BRCODING THEM

NUMBER OF SEQUENCES: 37

CORRESPONDENCE ADDRESS:
                                                                                                                             APPLICANT: Caceci, Thomas
APPLICANT: Toth, Thomas E.
APPLICANT: Szumanski, Maria B.W.
TITLE OF INVENTION: SYNTHETIC ANTIFREEZE PEPTIDE AND
TITLE OF INVENTION: SYNTHETIC GENE CODING FOR ITS PRODUCTION
NUMBER OF SEQUENCES: 43
                                                                                                                                                                                                                                         CORRESPONDENCE ADDRESS:
